The Wisconsin Soaring Society maintains a hangar at Hartford Airport (HXF) - a wonderfully maintained grass and asphalt surfaced airport operated by the city of Hartford.

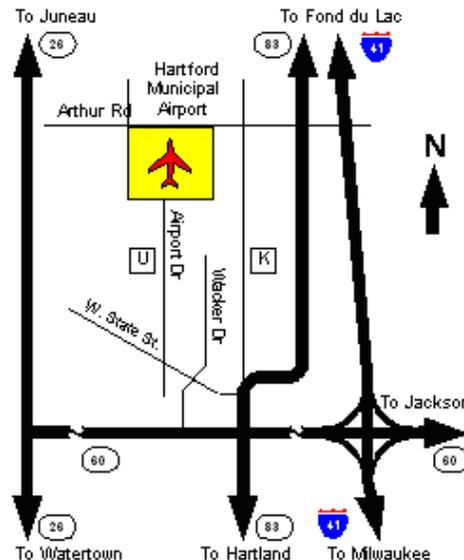

The airport is located at Hartford's North West corner and is bound by County Road U on one side and Arthur Road on the other. The entrance is off County Road U. Airports are small, close knit communities. Ask anybody for additional directions. They will be happy to help.

How the Wisconsin Soaring Society can help you eat better-

Lots of pilots still saddle-up the ol' bug smasher for another round of \$100 hamburgers. But, after awhile, what comes between takeoff and landing (and maybe even between the buns) can start getting old. When pilots lose their taste for airport hamburgers, they don't fly as often – or maybe stop flying altogether. And things like rising gas prices, an engine nearing its TBO or the need to schedule another aviation physical make those big-bucks burgers that much tougher to justify.

But soaring can put the spice and variety back in your aviation diet at surprisingly low cost. Soaring pilots know the joy of skillfully working natural atmospheric forces to stay aloft, and savor the fresh challenges and endless rewards of every new flight. And they do it at a fraction of power flying prices, with no medical certificate required.

No need to invent a reason to go for burgers, just lots of real stick-and-rudder flying and the quiet thrill of climbing high and going far by using your wits instead of gasoline. Soaring flight itself is the reward.

Like life, it's not the destination so much as the quality of the journey that matters.

-and soar like a bird...

...which is about as close to being angelic as most of us will ever get.

Even among power pilots, soaring flight is little known in the United States, but has a long history in Europe. Taken to the extreme, soaring flight has carried pilots to almost 50,000 feet and from Pennsylvania to Georgia in a single silent day...and without using a drop of gas.

Find out how you can learn to fly like that too.

Please call the number listed elsewhere on this brochure, take a glider ride to see how much you like it, or join The Wisconsin Soaring Society. As students, pilots, and instructors, we look forward to the delight of making your flying experience meaningful, rewarding and part of a life-long journey that matters.

How we do it -

To keep cost low, the club owns - in partnership with participating members - one powerful Pawnee towplane, one aerobatic two-place sailplane, two rugged two-place training sailplanes, and four single place sailplanes.

Some of our pilots bring their own ships and to save on hangar costs at the end of the day, tie them down or store them in the trailer they came in.

All our flight instructors are FAA certified and offer those services free of charge so that they like everyone else in the club, can have the pleasure of watching the power pilot experience their old world from a new perspective...as safe and secure soaring pilots.
